Autonomous Emergency Braking (AEB) Feature Brief

Author: Autonomous Drive PM Team | Date: October 2026

Functional Obligations (Unnumbered Draft)

• The forward radar shall detect stationary obstacles at speeds up to 120 km/h.

• The vision perception module should classify pedestrians and cyclists in poor lighting.

• The brake actuator must apply maximum deceleration within 150ms of critical collision alert.

• The instrument cluster shall flash visual red warnings and sound 85dB acoustic chimes.

• The vehicle should record pre-crash sensor telemetry to non-volatile crash recorder.
